ABSTRACT

Topic: EVENT MANAGEMENT ONLINE PORTAL

Project Nature: Mini Project Extension

Completion Level: completed module

Event Management Online Portal is a **web-based application** that supports online **registration** and **feedback** evaluation for event training **programs such as seminars functions marriage and workshops**. It helps program attendees, organizers, the authors and the reviewers in their respective activities. Customer can easily view surf over the website and select the desired event they want to book for the event.

Existing system have some limitations with each company have each site and searching these are difficult for users. This website help customer to search all the events under the same website and book without any hassle.

Modules:

• Admin

He has the **overall management** over the site. He checks the license of the company of all and approves them, **checks the working of the company**, **keep log history** and **activity records**. He can see details of **feedback** about users. He can view the **complaint** or **messages** send by the **customers** and **event host**.

• <u>Customer</u>

Customers once can **register** and check for their perspectives and look for good events host, They can even **book** for **small** as well as **large function**. They can book and confirm their event a week before the day using this event management online portal.

• Event host

They can **register** their company with sufficient details and become a **premium member** in which they can **show case their main courses, decorations, foods and beverages and all the possible way offers.** They took the booking from customers and payment through online and offer the event on the specified day.
